

Who actually lubricates your HSK clamping sets?

Lubritool® lubricates your machine tool automatically in 5 seconds

NOW also as HSK-A40
and HSK-A50

LUBRITool® LUBRICATION DEVICE

- ⌚ Quick + automatic: lubrication in 5 seconds
- ⌚ Increasing the machine availability by about 10 hours/year
- ⌚ Precision dosing for optimal and resource-efficient lubrication

LUBRITOOOL® LUBRICATION DEVICE

In order to guarantee the impeccable functioning of milling machines and machining centres, the tool clamping system should be maintained regularly. The patent-pending Lubritool® lubrication device enables automatic lubrication within 5 seconds.

Traditionally, manual lubrication consisted of a maintenance effort of several minutes. RÖHM developed its Lubritool® lubrication device to make these routine downtimes a thing of the past. When the CNC control senses the need

for lubrication, it sends a command and the Lubritool® is automatically deployed directly from the tool magazine to supply the tool clamping system with the ideal quantity of lubricant within seconds.

HOW LUBRITOOOL® WORKS IN YOUR MACHINE TOOL

Lubritool® is located in the tool magazine. Whenever the machine control notifies that a lubrication process is necessary, Lubritool® will be sent up into the spindle.

The lubrication impulse is automatically activated within the spindle. An optimal quantity of Lubriflux lubricant is sprayed onto the right place of the tool clamping system.

After the lubrication process, Lubritool® is sent back to the tool magazine and remains there until the next lubrication cycle.

This is how Lubritool® works:
Video on its use

WHY LUBRITOOL®?

1

OPTIMAL LUBRICATION:

The ideal lubricant. Just at the right time.
In the right quantity and place.

2

MINIMAL MAINTENANCE TIMES:

Lubrication in 5 seconds rather than 5 minutes.
Increasing the machine availability by about 10 hours/year.

3

AUTOMATED LUBRICATION:

Never forget the maintenance again.
Increase the service life of the clamping sets.

4

COMPACT DESIGN:

Fits in any conventional machine tool.

5

RESOURCE-EFFICIENT LUBRICATION:

Precision dosing of the lubricant.
