Confidently meeting exciting challenges!

Claw-jaws SKB: tighter hold with less force
SKB Claw jaws – the clever alternative to embossing technology

Clamping solutions, like the embossing technology, are fully en vogue. Here, a mark is stamped onto the workpiece by a stamping station. When the workpiece is clamped in the vice, special stamp-clamping jaws engage themselves exactly in these small recesses. This way, very high holding forces can be realized with a clearly reduced force and low material loss – an important advantage for sensitive and easily deformable parts.

And exactly the same effect is provided by the innovative RÖHM claw jaws SKB. But they achieve this faster and more cost-effectively. Because "stamping" and clamping are done in one operation – so you can save yourself the stamping station.

Claw jaws SKB: stronger, more flexible, more efficient – obviously the better choice

- Positive-fit clamping by the penetration of the hardened claw tips
- High holding forces: enhancement by a factor of 3 to 5 compared to standard jaws
- 5-side machining in one set-up
- Low material loss
- Shorter cycle times
- Reduced production costs and costs per piece

- For use on vices
- Easy to screw onto RÖHM NC Compact Vices
- Easy, reliable clamping of parallel raw and sawed parts
- Hydraulic or manual clamping
- With fine step for clamping depth up to 2 mm
- Without fine step for clamping depth > 2 mm
SKB Claw jaws – the clever alternative to embossing technology

For use on vices

- Easy to screw onto RÖHM NC Compact Vices
- Easy, reliable clamping of parallel raw and sawed parts
- Hydraulic or manual clamping
- With fine step for clamping depth up to 2 mm
- Without fine step for clamping depth > 2 mm

Claw jaws SKB without step, clamping depth > 2 mm, workpiece clamping e.g. with "Cliparc" support rails

Claw jaws SKB with fine step for workpieces with max. edge radius of 1 mm, clamping depth 2 mm, low material loss

Alternative to embossing technology

Claw jaws SKB without step, clamping depth > 2 mm, workpiece clamping e.g. with "Cliparc" support rails
SKB claw jaws with fine step
- 2 mm clamping depth

SKB claw jaws without step
- universal for clamping depth >2 mm
