

## **Super compact and extremely high-quality – the new EXTRA RV13-XS**

**Sontheim/Brenz.** With the new keyless drill chuck EXTRA RV13-XS the clamping and gripping technology specialist RÖHM offers a particularly compact solution for the latest generation cordless screwdrivers, drill drivers and hammer drills on the market. With a total length of only 55.8 millimetres in the open position, the drill chuck in size 13 is one of the smallest of its kind.

The drill chuck was designed for the semi- and professional sector, among others for the latest generation of devices with brushless motors. The noticeably reduced overall length and weight reduction of approx. 10 percent at the bit, which considerably reduces the top-heaviness of the devices, completely fulfil the requirements of the new screw drills. The redesigned end plate makes sure that dust can escape and prevents penetration of dirt into the chuck.

The RÖHM Premium Line drill chuck is available in two versions – as one-piece chuck with plastic sleeve and also as one-piece with metal sleeve. The standard mount is 1/2"-20.
