The innovation and user-friendliness of the Röhm cycle chuck convinced the jury of the MaschinenMarkt China trade journal.

The coveted prize was awarded on the occasion of its 20-year anniversary under the motto of “Driving the Innovation of Modern Machine Manufacturing in China”.

Anthony Ding, Manager of Röhm China: “As the leading company in this product series, Röhm offers its customers mature products at the highest technical level that prevail due to the high utility value.”

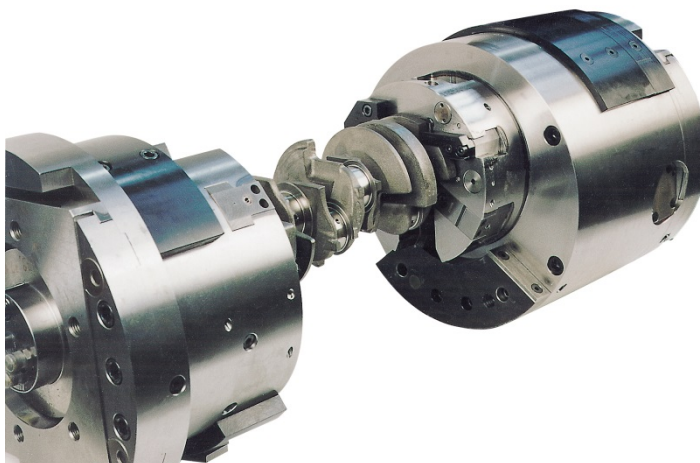

This is also reflected in the high popularity of the HTF. More than 80 percent of automobile manufacturing lines in China use the cycle chuck from Röhm, which is rated by experts as one of the most innovative investment goods for the automotive industry.

The product details: The HTF cycle chuck is perfectly suited for efficient turning of workpieces with one centric and one (or more) eccentric rotation centres. In automobile construction that means the casing, pistons or crankshafts. Here, machining can be decidedly efficient, because the centre to be machined is moved without reclamping. The clamping process is handled by the integrated hydraulic pistons. In addition, a long service life is achieved thanks to the robust construction.
